Invitation to review Configurable Items amended as part of the February 2012 Release of BSC Systems

Why do I need to review these documents?

The February 2012 Release of BSC Systems (the "February 12 Release") includes Approved Modification [P266](#) "Improving the allocation of Reactive Power flows between Import and Export Metering Systems"; the changes to Configurable Items for P266 have not been seen by participants yet – this is your opportunity to comment on the proposed changes.

If you are a Supplier, a Licence Exemptable Generator, an HHDA, an HHDC or SVA Half Hourly Meter Operator Agent, you are likely to be impacted by these changes, so your comments will be valuable to us.

What else is in the February 11 Release?

The February 12 Release also includes Approved Modifications [P268](#), [P269](#) and [P273](#), and approved Change Proposals [CP1347](#) and [CP1349](#). However, all amended Configurable Items for these changes, with the exception of the CRA URS amended for P268 and P269, have already been reviewed by industry and approved by the Panel or the Supplier Volume Allocation Group (SVG). As a result, they are not included in this review.

What Documents do I need to review?

The table below lists all documents for review, which are available for download from [the February 12 Release page of the ELEXON website](#).
