Notification of revised file format in BSCP510 following Industry Review (P223)

Background

BSCP510 "The Provision of Sampling Data to the Profile Administrator" was issued for industry review via SVA CCC104 on 13 May 2009. Based on comments from the review, we've made a significant change to the file format in BSCP. We would like to bring this to your attention and invite you to review it before we take it for approval.

What do I need to review?

We've changed the format of the file used to submit half hourly data. In particular, we've added a header and trailer record. Please pay special attention to the trailer record as this involves a calculation based on the data in the file. You can find this change in section 4.1.5 of document change record v0.6 of BSCP510.

Will this change impact me?

Yes, if you are a Supplier. If you will use your own agents to collect and provide half hourly data, you will need to ensure that the file you issue to the Profile Administrator (PrA) for P223 is in this format.

How long do I have to provide comments?

Please can you review the amended file format and return any comments, using the form provided as attachment 1 to this circular, to our [Release](#) mailbox by the **17:00 on Friday 19 June, 2009**.

Document change record version 0.6 of BSCP510 is available to download from the [ELEXON Website](#).

Document Title	Document Change Record Version
BSCP510 - The Provision of Sampling Data to the Profile Administrator	Changes to BSCP510 for P223 v0.6

Please note that the changes are draft only and may be subject to further changes following the receipt of review comments.
