

Change Proposal	CP No: CP1538 <i>Version No:</i> 1.0
Title Aligning IDD Part 1 document with System implementation of TERRE for TIBCO messages	
Description of Problem/Issue The solution for project TERRE (P344) was implemented in BMRS in December 2019. Subsequent testing have identified inconsistencies between actual/system implementation and BSC documentations (IDD Part 1). This CP will align the documentations with the implementation of project TERRE. The IDD documentation errors relate to TIBCO messages as follows: <ul style="list-style-type: none"> • ‘Marketobjectstatus’ was not specified as a Tibco data item; • ‘Marketobjectstatus’ was not included in the ‘AD – RR Activation Data’ Tibco message; and • the Message Subject Name for the ‘AD – RR Activation Data’ Tibco message was specified incorrectly; and • The NETA IDD Part 1 did not state that three data items relating to Bid Ids would be omitted from the RR Bid Data Tibco message – rather than being included as null values - if not received in the source file.. <p>If these changes are not made, Tibco Users may not be able to receive the ‘AD – RR Activation Data’ Tibco message as they may have configured their system to what the current documentation says and not what the system will actually send.</p>	
Proposed Solution	

The proposed solution is to Amend the IDD Part 1 document to:

- Add the 'Marketobjectstatus' Tibco data item to Section 4.12.4 of the IDD part 1 document;
- Amend the 'AD – RR Activation Data Tibco' message definition in Section 4.12.5.74 of the IDD Part 1 document to include 'Marketobjectstatus'; and
- Change the 'AD – RR Activation Data Tibco' message subject name to 'BMRA.RR.<BM_Unit>.AD'; and
- Add footnotes to the following data items in Section 4.12.5.69 to clarify that "This data item will be omitted from the Tibco message if not received in the source file":
 - Linked Bind ID (LB)
 - Multipart Bid ID (MB)
 - Exclusive Bid ID (EB).

There will be no impact on BSC or participant systems. The change is a document only change. Any Party wishing to receive TERRE data in Tibco messages will need to make changes to their own systems to ensure the data is correctly processed.

Justification for Change

This is a document only change to accurately reflect system changes that have already been approved, and are currently being implemented. The data sent out by Tibco that this change relates to will only go out if TERRE goes ahead; however, if we do not change the IDD definitions, there is a risk that any future work that happens on those systems could be compromised by those incorrect definitions, and it is important that our definitions accurately reflect the systems they refer to.

To which section of the Code does the CP relate, and does the CP facilitate the current provisions of the Code?

NETA IDD Part 1

Estimated Implementation Costs

£240

BSC Configurable Items Affected by Proposed Solution

NETA IDD Part 1

Impact on Core Industry Documents or System Operator-Transmission Owner Code

No Impact

Related Changes and/or BSC Releases

No related changes

Requested Implementation Date (mandatory by originator)

1 April 2021
Reason: First available BSC release requested to ensure all users are able to receive Tibco messages.
