

CP1545- Introducing Technical Assurance of Metering (TAM) Central Volume Allocation (CVA) Specific Sample audits

Hello, my name is George Crabtree and I'm the lead analyst for CP1545 - Introducing Technical Assurance of Metering Central Volume Allocation Specific Sample audits. In this podcast I'm going to talk you through the background, solution and proposed implementation of the Change Proposal.

Exelon is currently only able to conduct Specific Sample Audits on Supplier Volume Allocation or SVA sites, which limits our ability to assure the integrity of Settlement across Central Volume Allocation or CVA sites.

The Performance Assurance Board or the PAB, have the option to request a Specific Sample through the Technical Assurance of Metering, which focuses on an area of perceived risk to Settlement. However, we are currently only able to undertake a Specific Sample on SVA Metering Systems, which limits our ability to provide targeted Assurance on CVA Metering Systems.

The solution is to remove the 'SVA only' clause from BSCP27 which will allow for the PAB to request Specific Samples to be performed on CVA Metering Systems. It will also allow the PAB greater flexibility in its application of detective Assurance measures to the CVA market.

The proposed implementation date will be the 4 November 2021.

You can find more information on the CP1545 webpage which will be updated as the CP progresses. On the webpage you can also find my contact details if you have any questions regarding the Change Proposal.

Thanks for listening.
