

Hello, my name is Jenny Sarsfield and I'm the lead analyst for CP1547 - Clarification on the Site Specific Line Loss Factor Calculation Process for Embedded Licensed Distribution System Operators.

In this podcast I'm going to talk you through the background, solution and proposed implementation of the Change Proposal.

Usually Embedded LDSOs would Mirror the LLFs of the Host LDSO, but as more are looking to calculate site specific LLFs it has become clear that there is confusion around the process and timeline requirements. A lack of clarity surrounding the requirements for Embedded LDSOs can pose a risk to the accuracy of Settlement.

This CP proposes to make changes to BSCP128, which details the methodologies for calculating and auditing Line Loss Factors, to provide more clarity for Embedded LDSOs undertaking these calculations.

This includes clarification that standard submission deadlines for all LDSOs will apply to Embedded LDSOs, and that Settlement data from a 12-month period is required.

These clarifications will give Embedded LDSOs a transparent view of the timeline and deliverable requirements, ensuring they provide the required data files within the defined timescales, and establishing a better understanding of the audit process.

The proposed implementation date will be the 4 November 2021.

You can find more information on the CP1547 webpage which will be updated as the CP progresses.

On the webpage you can also find my contact details if you have any questions regarding the Change Proposal.

Thank you for listening.
