Site Details

BM Unit Id(s) (if known):	E_GOSHS-1
BM Unit Name(s) (Max 30 Characters):	Goose House Lane
National Grid BM Unit Id(s) (if known and applicable):	GOSHS-1

¹If the BSCP38 Authorisations process has not been completed, this form can be signed by a registered company director and accompanied by a letter on company stationery signed by the same registered company director.

² BSCCo will publish all Panel determinations, though for confidential papers the details will be anonymised. BSCCo is required to keep a list of all Non-Standard BM Unit determinations which must be made available to any Party upon request.

Application:

Why are you applying for a Non-Standard BM Unit (please tick)	
The Plant and Apparatus does not fall into one of the standard categories in K3.1.4	X
The Plant and Apparatus does fall into one of the standard categories in K3.1.4 but a different configuration satisfies the requirements for BM Units in K3.1.2	
The Plant and Apparatus Exports or Imports are at a CVA Boundary Point at which there are other Exports or Imports for which another person is responsible (the Plant and Apparatus may or may not be of a Standard BM Unit configuration)	

Description of Non-Standard BM Unit configuration

The site consists of 17 1.2MW generators, each capable of being controlled individually but in practice run as a single 20MW unit.

Please provide electrical single line diagram(s) of the Plant and Apparatus included in the Non-Standard (and any Standard) BM Unit(s) to support your application. The diagrams need to clearly show the location of the Metering Equipment, in particular the Settlement Current and Voltage Transformers (CTs/VTs) and CT/VT ratios, all existing Boundary Points and any System Connection Points at or near the proposed Boundary Point(s) and which items of Plant and Apparatus comprise which Non-Standard (and any Standard) BM Unit(s).

List of electrical single line diagrams attached and description of Plant and Apparatus covered by each diagram.

Rationale

Rationale with reference to BSC Section K3.1 for the request for the Non-Standard BM Unit:

BSC Section K para 3.1.2(b) combined with 3.1.2(e) requires that a BM unit must consist of the smallest aggregation of plant or apparatus which are capable of being independently controlled.

While each genset on this site could, theoretically, be registered as a BM Unit, we propose that a single BM Unit covering all 17 engines would provide several benefits

- more useful service to the SO when being used in the BM (who would otherwise have to issue instructions to 17 different BM Units)
- There are recurring costs associated with maintaining CVA BM Units, these would be seventeen times higher than otherwise necessary if each generator was metered individually (£40,800 vs £2,400 per year), with no identifiable benefit
- Twenty seven BMUs instead of one has cost and convenience implications for the central and GFP Trading's settlements systems. This also applies to other areas where the site is represented within control systems, for example the EDT and EDL systems of National Grid.
