[1] The SVAA will distribute a cut down version of these dataflows unless the MDD recipients have specifically requested, via the BSC Service Desk, a full version of these dataflows. However, if all of the data items within the dataflows have changed, the SVAA will provide the complete dataflows to the recipients.

[2] The SVAA will distribute a cut down version of these dataflows unless the MDD recipients have specifically requested, via the BSC Service Desk, a full version of these dataflows.

[3] MDD recipients for these dataflows will include: Suppliers, DAs, DCs, MOAs, LDSOs, UMSO, Panel, SAA, CDCA, OFGEM, SMRS, NETSO~~Transmission Company~~, and SVAA (for use in Stage 2 DPP and Initial Volume Allocation Run). The SVAA will use the MDD matrix to determine how many versions of these dataflows are distributed to each MDD recipient. These dataflows will be sent automatically from the MDDM system to the SVA System. These recipients may also request data on an ad-hoc basis from MDDM.

[4] This dataflow will be provided with every publication of the MDD, even though the data contained within the file may not have changed.

[5] These dataflows will be provided with every publication of the MDD, even though the data contained within the file may not have changed.

[6] These dataflows are optional and will only be provided to a non-BSC party if the SVAA is directed to do so by BSCCo.

[7] The version of the D0227 dataflow being sent is the Standard Settlement Configuration extract file.
