### Total Demand and Party Imbalance Percentage

### Value of Imbalance Settlement

These graphs are for information only to put Elexon's role into context. The graphs will also be reported in the Trading Operations Report.

Each BSC Party has two accounts, a production and consumption account. The Imbalance Volume and cashflow is reported as an absolute sum by account and by Party. Some vertically integrated parties can have a short imbalance in one account and a long imbalance in the other account. These imbalances are settled at the same price, therefore the imbalance volume and cashflow net off.
