## 4. Allocating Axminster GSP to the Southern (\_H) GSP Group (SVG255/05)

- 4.1 The National Electricity Transmission System Operator (NETSO) has registered a new Grid Supply Point (GSP) at Axminster. The SVG, under delegated authority from the BSC Panel, must allocate this new GSP to a GSP Group. ELEXON recommended that the SVG allocates this GSP to the Southern \_H GSP Group.
- 4.2 A SVG Member queried whether there were any checks that Elexon can do to make sure that the metering is configured correctly. Elexon shared that they do a post energisation check because this is a new GSP. Once the Central Data Collection Agent (CDCA) see Metered Data on the new GSP, they sent it to the registrant and ask the registrant to confirm that it is correct.
- 4.3 Elexon wanted to bring to the SVG's attention that's this was a relatively new process, so may not have been done for some of the previous errors.
- 4.4 The SVG:
  - a) **APPROVED** the allocation of GSP AXMI\_H to the Southern (\_H) GSP Group.

### 7. CP1558 'New Registration data items and processes to support the MHHS transition' (SVG255/Verbal update)

- 7.1 An SVG Member commented that they felt the whole point of the CP was to create a reliable data set, if the CP is changed to say that SMRS is populated from existing data it would dilute the outcome of P432.
- 7.2 Elexon responded that the enduring processes will set those items independently, so there will just be some cases where for the existing thirty million meters we need to go through the existing data and populate it. If there's a measurement class rule that clearly identifies CTs, then that is a good starting point to at least presume that those will be CTs, but there still would have to be a process of having to go through all of them.
- 7.3 An SVG Member urged that Elexon needs to be very clear with what the next steps are rather than trying to rush to implement this CP.
- 7.4 Elexon noted that there are two consultations for this CP because the BSCP501 baseline is changing due to the REC 3.0 changes, so this has been built into the process to check that there are no conflicts or interactions. Additionally, this will keep CP1558 and the corresponding REC Change (R0032) aligned, the REC Change life cycle, and their change assessments go in a completely different sequence. They raise it first and then they do all the assessments later.
- 7.5 Elexon commented that the majority of consultation responses have indicated support for the solution; however there were concerns about the implementation date.
- 7.6 The SVG:
  - a) **NOTED** The Update.
