No.	CVA CC226
Purpose	For Review and Information
From	Change Delivery
Date	17 July 2009

Changes to the structure of Tibco messages for P217

What are the changes?

When P217 goes live, the IDD Part 1 will include a new Field located within the Tibco message "ISPSTACK – Indicative System Price Stack" called "Stack Item Final Price" which has the Field Type: "FP".

Please refer to section 4.7.5.46 of version 0.12 of the IDD Part 1 Document Change Record (DCR) for P217 for full details.

Am I affected by this?

If you have an automatic Tibco file loader, you may need to reconfigure its settings to be able to load the new file type.

Is there any more information?

Please be aware that version 0.12 of the IDD Part 1 DCR for P217 supersedes version 0.10 of the DCR, which was issued for review as part of CVA CC224 on 8 July 2009.

What else do I need to do?

Please review version 0.12 of the IDD Part 1 DCR for P217 and email any comments to Releases by the close of business on Thursday **23 July 2009**.

Make your review easier

You can make your review easier by looking at version 0.12a of the IDD Part 1 DCR for P217, which only shows the changes since version 0.8 of the DCR, which was issued for review as part of CVA CC220 on 25 March 2009.

For more information on this circular, please contact the Change Implementation Team by emailing to our Releases mailbox.
