

## Re-deployable fixed location enforcement.

The intelligent, re-deployable Flexi is ideally suited to a number of moving contraventions including bus lanes, banned turns, one way streets, yellow box junctions.

Requiring minimum infrastructure at deployment sites, ROADflow Flexi is easily deployed to enforce hot spots with little effort. These could include bus lane parking enforcement during busy public events or temporary enforcement, where a Flexi is deployed in a specific area until that location meets its compliance targets.

Key features of the ROADflow Flexi include:

- **Easy Deployment** - can be fixed to existing infrastructure and requires no roadside cabinet
- **Enforces 24/7** - proven to enforce continuously in the field with no human input required
- **Moving Violations** - take control of bus lane use, using live whitelists to detect misuse
- **Fully Automated** - the system automatically detects contraventions and generates evidence packs, sending them to review / processing using wireless technologies
- **Rugged and Lightweight** - tough construction for easier deployment
- **Accurate** - combines the latest ANPR technology with accurate GPS data to enforce difficult areas such as clearway bus routes
