Data estimation for 123 CVA outstations in GSP Group N (South Scotland)

What has happened?

We have been unable to collect data for 123 Central Volume Allocation (CVA) outstations for 10 August 2016 onwards due to maintenance work undertaken on communication lines in GSP Group N (South Scotland).

How will I be affected?

For the affected CVA sites we are following the processes documented in BSCP03 'Data Estimation and Substitution for Central Volume Allocation' – this involves either the use of the Check Meter for 55 of the sites or the use of Trended Data for the remaining 68 sites.

This process will mitigate the impact on the Credit Cover Percentage (CCP) calculation and the data in the II Settlement Run.

Here is the full list of affected CVA outstations:
