

UPDATE ON DISTRIBUTION CONNECTION AND USE OF SYSTEM AGREEMENT (DCUSA) CHANGE PROPOSAL (CP) 282

[DCP282 'Embedded Distribution Network Operator \(EDNO\) UMSO'](#) is currently with Ofgem for final consent following an overall DCUSA Party vote in favour of the change. Ofgem's decision is expected in May 2017.

The CP seeks to facilitate the management and trading of Unmetered Supplies (UMS) Apparatus connected to EDNO networks via the host DNO's UMS Operator service on one combined inventory, without the need for additional Metering Points (MPANs), following a request from the customer to the EDNO to do so.

The DCUSA's proposed implementation date for DCP282 is the first DCUSA Release following approval.
